

Running Updates to Your Windows Computer

It is critical to run the system updates to your computer regularly (every 2 weeks). Here's how:

Click on the Windows icon in the lower left corner. Next, click the "Settings" wheel icon.

From the menu, choose "Update & Security."

First click the "Check for update" button; launch and let those items run & install. Next, click the blue text "Check online for updates from Microsoft Update." Run & install those, as well. Reboot your computer. You're up-to-date and finished!
